SUMMARY

Backend Engineer with 3.5+ years of experience building scalable systems with Node.js and NestJS, specializing in performance optimization, microservices, and agile-driven development for high-traffic applications.

EXPERIENCE

Software Engineer

Nuvento Inc (Gokwik)

July 2025 - May 2026

- Collaborated on a scaled multi-channel customer engagement platform (WhatsApp, Instagram, Email, Facebook, RCS, etc.) serving **200+ merchants** daily, enabling unified support and campaign orchestration.
- Developed a **custom MCP server integrating Claude AI with KwikEngage APIs**, automating merchant out-of-office configuration and significantly reducing manual ops effort by **40%**.
- Led the **migration of legacy billing systems** from Laravel (PHP) to NestJS, improving modularity, maintainability, and system performance while reducing technical debt.
- Built an **AI-powered** agent assist feature enabling users to optimize and refine messages before sending them to customers.
- Designed and delivered key product features including **workflow automation, delay nodes in conversational flows, and agent out-of-office handling**, improving automation efficiency and operational scalability.
- Improved merchant onboarding efficiency by **60%** through query optimization, database indexing, and process synchronization.

Software Engineer

GlueLabs

August 2022 - September 2024

- Engineered data pipelines for processing Shopify's event dataset, performing event stitching, and crafting optimized **SQL queries** to extract actionable insights based on specific requirements.
- Designed and developed **File Service**, a microservice for centralized media management, ensuring secure and efficient file storage, retrieval, and access across all products.
- Optimized the product feed and user profile performance by leveraging **Redis caching**, reducing latency and improving response times by **70%**.
- Implemented **complex payment integration** on the platform, including onboarding users as merchants, conducting KYC processes, and facilitating direct payments between consumers and merchants.
- Improved application **scalability and reliability** by handling asynchronous event processing via **message queues**, ensuring efficient task execution and system stability.
- Improved and deployed a **high-performance GraphQL API**, enhancing data-fetching efficiency by **50%**, enabling seamless scalability to support exponential user growth.

Software Engineer Intern

GlueLabs

January 2022 - July 2022

- Built advanced image optimization and compression pipelines with adaptive multi-resolution delivery, improving media fetch performance by 30%.
- Developed scalable RESTful APIs for drafts, post grouping, user tagging, and Meilisearch-powered content retrieval, significantly enhancing content management and search performance.
- Implemented user-centric platform features including account deletion, blocking, and Kafka-based real-time analytics for the admin portal, enabling safer interactions and data-driven decision-making.

EDUCATION

Bachelor of Engineering, Computer Science

Thapar Institute of Engineering & Technology · Patiala · 2022

PROJECTS

Kwikengage AI Ops - MCP Server

Gokwik

- Built a custom MCP (Model Context Protocol) server integrating Claude AI with KwikEngage's backend, enabling natural language-driven management of merchant configurations.
- Developed tools for user search, merchant token generation, and out-of-office configuration retrieval and updates via secure REST APIs.
- Exposed the server as a Claude-compatible connector, allowing ops teams to interact with merchant directly through Claude.

File Management Service

Gluelabs

- Engineered a backend service for seamless media upload management, integrating with AWS, Cloudinary, and other platforms to ensure secure and efficient storage.
- Enabled multi-resolution media processing for optimized and efficient content delivery.
- Integrated CloudFront CDN, significantly reducing latency and enhancing media retrieval speed for a smoother user experience.

Globe Trotter, Nasa Space Apps

- Developed a data visualization solution for NASA's World Wide Technology, leveraging existing APIs to extract and interpret complex datasets.
- Built a web application to efficiently fetch, decode, and present JSON data, enhancing accessibility and usability.

SKILLS

Languages & Frameworks: Javascript, TypeScript, Python, C/C++, NodeJS, NestJS, GraphQL, Jest

Databases & Caching: PostgreSQL, MongoDB, MySQL, TimeScaleDB, Clickhouse, Redis, Kafka

Cloud & Devops: AWS (EC2, S3, SES, Cloudfront), Docker, Nginx, Github Actions, CI/CD, Git

Concepts: Microservices, REST APIs, Agile, MCP, Event-Driven Architecture, System Design, Scalability, Distributed Systems

ACHIEVEMENTS

Hackathons & Competitions

- Nasa Space Apps Challenge (Chandigarh University, 2nd Runner up)
- Esya: HackIIITD (IIIT Delhi, Runner Up)
- ELC Robotic Arm (TIET, Patiala, Winner)
